

HUNTER KOENIG-ALBERT

2522591211 • hjkalbert@gmail.com • New Bern, North Carolina, 28586, United States • Open to Remote • [LinkedIn](#)

Senior Software Engineer

Results-driven Senior Software Engineer with over 6 years of experience in software development, focusing on web technologies such as React, Vue, Next.js, TypeScript, Node.js, JavaScript, and AWS. Demonstrated a strong problem-solving mindset and adaptability by successfully transitioning into web development after a personal setback in 2018. Proven leadership skills through leading teams and mentoring interns, dedicated to fostering growth within the tech community. Committed to delivering solutions that drive business growth and personal development, backed by a Bachelor's degree in Computer Software Engineering from Eszterházy Károly Catholic University.

Professional Experience

Mathison Projects, United States (Remote)

Sep 2018 - Feb 2024

Software Engineer, Remote

At Mathison Projects, I was responsible for leading teams on internal projects leveraging React.js, Svelte, Vue.js, Node.js, AWS, Serverless, Nest.js, Next.js, and more in order to create SaaS products. Additionally, I served several clients in a variety of industries including Healthcare, Commerce, and Finance, delivering high quality code on a contractual basis; occasionally being deployed to help a colleague with no disruptions or lead time required thanks to my "context over tasks" mindset.

- Designed and launched a full-stack Next.js blog platform leveraging AWS Amplify, GraphQL/AppSync, and serverless Lambda functions, enabling seamless content delivery and supporting 6+ structured content types with DynamoDB and S3 storage.
- Led the development of an application using AWS IaC, implementing nearly a dozen DynamoDB tables with optimized GSI indexes for multi-tenant data access, automated S3 static website hosting with CloudFront CDN distributions, and orchestrated serverless Lambda functions with API Gateway for RESTful backend services, while developing and maintaining comprehensive DevOps automation scripts for CI/CD pipeline deployment across multiple environments. Also implemented automated environment variable injection from CloudFormation outputs, with comprehensive deployment validation and rollback capabilities.
- Architected a full-stack drag-and-drop website builder using Next.js 14, React 18, and TypeScript, integrated with AWS Amplify for GraphQL API management, AWS Cognito for authentication, S3 for file storage, and AWS SAM with Lambda functions for serverless backend processing, utilizing Ant Design for UI components and CKEditor5 for rich text editing capabilities.
- Developed a comprehensive content management framework featuring 15+ reusable drag-and-drop components (video banners, carousels, galleries, contact forms, news feeds), real-time page builder with component reordering and background customization, integrated file manager with S3 storage, SEO optimization tools, article/category management system, and multi-domain deployment support enabling rapid website creation and deployment across multiple client projects.

Vendori, United States (Remote)

May 2024 - Apr 2025

Software Engineer, Remote

At Vendori I was responsible for collaborative Systems Design, Architecting, Development, and Implementation across the Front and Back Ends of Vendori's core applications. Additionally, I was responsible for the system design, and development of a new, modernized Front-End application to replace a legacy application along with a custom PDF generation micro-service.

- Used Systems Design skills to create and validate the flow, and management, of data throughout existing and new applications.
- Architected a modular front-end architecture for a quote management platform, enabling drag-and-drop templating, rich text editing, and dynamic data visualisation while reducing development complexity for future feature expansion.
- Delivered Back-End functionality using Nest.js, Node.js, and PostgreSQL queries in support of new Front-End application, enabling other developers to focus on maintenance and refactoring of old features without sacrificing forward progress.
- Architected and developed a high-performance serverless PDF generation microservice using AWS Lambda, Puppeteer, and TypeScript that processed complex quote data through intelligent request interception, pre-fetched and cached 10+ API endpoints to eliminate network latency, implemented advanced AWS IAM role assumption for secure S3 operations, and delivered enterprise-grade PDF documents in under 15 seconds while supporting multi-tenant authentication and cross-stage deployment automation.
- Delivered a sophisticated B2B sales automation platform incorporating dynamic quote templating with a drag-and-drop canvas editor, a real-time rule engine for automated pricing, discounting, and workflow triggers, external customer deal rooms with secure access controls, multi-tenant approval workflows supported by notification systems, server-side PDF generation with custom layouts, and comprehensive Redux state management to handle complex business logic across the entire quote lifecycle.

Education

Eszterházy Károly Katolikus Egyetem / Eszterházy Károly Catholic University, Eger, Hungary, Bachelor's degree, Computer Software Engineering in Computer Software Engineering, (GPA: 3.6), Feb 2019 - Feb 2023

- Completed comprehensive coursework in computer software engineering, establishing strong expertise in software design patterns applicable to scalable React applications.

Projects

Homeloaf

- Homeloaf is an AI-driven project enabling users to input a list of ingredients they have to hand and receive a recipe for a meal. For when you're hungry, but you just don't know what to cook.
- Found at: <https://homeloaf-be.vercel.app>

Core Competencies

Top Skills NestJS, Docker, ReactJS, Nextjs, Nestjs, AWS, Cloud Services, Cloud Application Development, TypeScript, Node.js, PostgreSQL, HTML/CSS, Software System Design, Jenkins

Other Skills Svelte, Material-UI, Go, GoLang, AWS Amplify, AWS AppSync, AWS CodeBuild, AWS CodePipeline, AWS CloudFormation, AWS CLI, AWS Lambda, Tailwind, AngularJS, AWS CodeDeploy, AWS CodeCommit, Git (Version Control System), Infrastructure as Code (IaC), Angular, Jenkinsfile
